

## NORTH TABLE MOUNTAIN REPORT – December 2018

[WWW.NTMWATER.ORG](http://WWW.NTMWATER.ORG)

### WINTER QUARTER AND YOUR SEWER BILL!!

Residential sewer charges for our metered customers are based on the water usage during the winter months. This is the time of year when most customers are not using water for irrigation, washing cars, or other outside uses or activities.

- Your winter quarter months are December, January and February.
- The sewer charge is based on 130% of the water use charge during this three month period.
- Your newly calculated sewer charge will appear on your March 15, 2019 statement.

For instance, if you use 18,000 gallons of water during your winter quarter, your water charge would be \$75.69. Based on your water charge, we would then calculate your sewer bill to be \$98.40. Your sewer bill would then remain at \$98.40 until the following year. (There can be changes to this set amount only if a rate increase takes effect during the year.)

The District has a minimum charge for water and sewer which is based on 5,000 gallons. The minimum quarterly bill for water and sewer service combined is \$40.14.

*Making sure you don't have any leaks during these winter months can keep your sewer charge down, and save you from paying for unnecessary water going down the drain. Visit [www.ntmwater.org](http://www.ntmwater.org) to create a username and login to view your monthly water usage and historic water bills.*

Don't  
Dump  
It!

*Instead...*

mix your unwanted medications with old coffee grounds or kitty litter, wrap that mixture up, and throw it in the trash.

Our process treats many drugs, but it can't remove them all. Drugs you flush down the toilet enter our system, and some wind up in the South Platte River.
